

Job description

We require CNC Turners – Programmer/Setter/Operator to help the company achieve its plans for growth. The ideal candidates will be experienced engineers with the ability to work to high standards of quality and close tolerances. We encourage you to bring your skills and ideas to the company and work with a commitment to continuous improvement and a flexible approach to work.

Desired Skills and Experience

Ability to set and operate high end CNC Machine Tools, particular experience with Okuma and Mazak would be an advantage but not essential (Fanuc control experience). A passion for engineering and appreciation and commitment to achieve our client's requirements is essential.

About this company

T&G Engineering Limited

Founded in 1975, T and G Engineering is one of Europe's foremost high precision engineering companies serving and supporting a worldwide customer base.

State of the art equipment in harness with a highly skilled workforce gives us the ability to supply challenging, complex and difficult to make components and products with extremely close tolerances, improving product performance. We have a large CNC machining facility, along with a comprehensive range of wire erosion (wire EDM) machinery and capabilities. Our specialist area is in the machining of complex components for the following key industries Aerospace, Automotive, Pharmaceutical, Medical and Can Tooling.

Technical knowledge and flexibility has allowed T&G to penetrate various market sectors. In an ever changing industrial world, this flexibility and ability to manage are seen as key strengths

T&G offer good rates of pay plus overtime, clean & air conditioned working environment and a private healthcare after a qualifying period.
